

HMT® Pro-Fill Auto-Fill™ System Automatically fills your tank... And keeps it filled.

Boost the efficiency of your hot melt operation with our innovative Pro-Fill Auto-Fill™ System. Compatible with all HMT hot melt equipment, this System draws bulk adhesive from any nearby container to replenish the melt tank automatically without the need for labor-intensive manual loading. This innovation minimizes worker contact with hot adhesives or surfaces, cuts adhesive waste, charring and downtime... plus it prevents melt tank overfilling and spilling.

With HMT's Pro-Fill Auto-Fill™ System, simply:

1. Fill the tank with adhesive
2. Choose the "Re-Fill Amount" from 1–30 lbs
3. Fill a large plastic container with pellets or slats (no bigger than ½")
4. Insert the vacuum wand
5. Operate the system normally
6. The vacuum Re-Fills the tank and the Load Alert™ resets automatically

Pro-Fill Auto-Fill™ and Pro-Fill Load Alert™ Systems are just the latest innovations from Hot Melt Technologies, the company that has built a reputation as the "go-to" team for everything hot melt, one innovation and one satisfied customer at a time.
