Service Information

Needle Stroke Adjustment Screw:

Adjusts how far the needle lifts off the needle seat/ nozzle when activated.

How to Adjust:

1. Loosen the 7/16" lock nut.
2. Using a 1/8" allen wrench, turn the adjustment screw clockwise until the needle makes contact with the needle seat/nozzle.

Caution: Do not overtighten, only make contact.

3. Back the adjustment screw out (counter clockwise) until the appropriate flow for your application is reached.

Note: Shorter stroke = longer seal life.

4. Tighten the lock nut while holding the adjustment screw in place.
5. Reconnect actuation air supply.

Activation Air Pressure:

80 - 120 psi clean, dry, non-oiled air must be used.

Note: Air Pressure less than 80 psi may cause sluggish cycling and/or leaks.
